INDICIT Dissemination Meeting

December 4th, 2018 – Athens, Greece

INDICIT is a collaborative 2-year project supported by the European Commission. Gathering stakeholders from 7 countries, it aims to:

- develop a common approach for monitoring the marine debris ingestion by sea turtles
- assess whether other species could be useful indicators.

This meeting is a unique opportunity for all stakeholders to:

- get detailed information about the set of standardized tools and protocols for monitoring the impacts of litter on marine fauna developed by INDICIT
- Discuss future prospects of the monitoring of the marine debris with policy makers

INDICIT actions

develop an international perennial network which will exchange key information

study the impact of marine litter on marine organisms

test existing, and propose new indicators for monitoring the impacts of litter on marine fauna

provide training and standardized tools to stakeholders involved in the monitoring of debris impacts
